(June 28)

FEDERAL PARTNERS CONTINUE TO SUPPORT STATE AND LOCAL PARTNERS AS THEY FIGHT WILDFIRES

As the federal family continues to aggressively respond to the wildfires in the Western states, the U.S. Forest Service, Department of the Interior, and FEMA announced additional resources have been deployed to support state and local partners. In light of the severity of current fire activity, the National Interagency Fire Center has raised the national preparedness level to level 4, on a scale of 1-5. Preparedness Level 4 (PL 4) triggers increased planning for additional resources and greater oversight of resource allocations in order to achieve the most effective deployment. PL 4 calls for additional restrictions on the practice of prescribed fire application or managing fires for multiple objectives to ensure resources are being deployed to the highest priorities.

Since Monday June 25, 17 air-tankers have cycled in and out of firefighting action over the last 48 hours across the western states, and more than 8,400 personnel, 578 fire engines and 79 helicopters are operating on wildfires around the U.S. Approximately half of active federal wildfire-fighting resources are currently staged in Colorado. More than 760 federal, state and local firefighters and six helicopters are fighting the aggressive Waldo Canyon fire today in the hillsides west of Colorado Springs. Additionally, a total of nine large air-tankers, including four military C-130s equipped with Modular Airborne Fire Fighting Systems, are currently in Colorado working on the Waldo Canyon and other fires, in support of local officials leading the fight against the wildfire.

Federal partners also continue to work closely with first responders and firefighters from local, state, and tribal agencies to combat and monitor large wildfires including those in Alaska, Arizona, California, Colorado, Montana Nevada, New Mexico, Utah and Wyoming.

"As we continue this fight, the Forest Service and its federal partners continue to bring extensive resources to bear and work closely with our local partners to combat these destructive fires," said U.S. Forest Service Chief Tom Tidwell. "Thousands of brave men and women on the front

line are battling dry conditions, a lack of snowpack, excessive dead trees, hot weather and complex terrain to try to get the fires throughout the West under control."

The Waldo Canyon fire stretches in three directions across very dry forests. The fire has consumed more than 15,375 acres of forested land since Saturday, and has forced thousands of evacuations. With low humidity, winds as high as 65 mph and temperatures in the 90s forecast for the coming days, the situation remains challenging as firefighters work in what is described as very difficult terrain.

The U.S. Department of Agriculture and the Department of the Interior, in partnerships with states and local agencies, have developed a cohesive strategy to respond to the increase in wildfires in recent years by focusing on:

- **Restoring and maintaining resilient landscapes.** Through forest restoration activities such as mechanical thinning and controlled burns, officials can make forests healthier and less susceptible to catastrophic fire.
- **Creating fire-adapted communities.** The Forest Service and its partners are working with communities to reduce fire hazards around houses to make them more resistant to wildfire threats.
- **Responding to Wildfires.** This element considers the full spectrum of fire management activities and recognizes the differences in missions among local, state, tribal and Federal agencies.

Federal land managers are also helping communities prepare for wildfire. Federal partnerships with state, tribal and local agencies strengthen preparedness programs, such as Firewise <http://www.firewise.org/> and Ready Set Go! <http://www.iafc.org/readySetGo> that help families and communities prepare for and survive wildfire. You can also visit FEMA's Ready.gov <http://www.ready.gov>, to learn more about steps you and your family can take now to be prepared for an emergency.

AGRICULTURE SECRETARY VILSACK VISITS OHIO STATE UNIVERSITY HIGHLIGHTING CANCER-FIGHTING RESEARCH AND THE 150 YEARS OF LAND GRANT UNIVERSITY PARTNERSHIPS

Shining a light on agricultural research that has implications for fighting cancer, Agriculture Secretary Tom Vilsack visited The Ohio State University's (OSU) Center for Advanced

Functional Foods Research and Entrepreneurship (CAFFRE), where researchers are studying the development of novel functional foods and components that offer impressive benefits to health. Vilsack's visit coincides with the celebration of the 150th anniversary of the founding of the land grant university system with the signing of the Morrill Act of 1862.

"Many people do not understand the contributions to human health that agricultural research makes," said Vilsack. "But here at Ohio State, there are many vivid examples showcasing the essential role agricultural research plays in solving some of the world's most pressing health problems, all while building and revitalizing rural America."

CAFFRE researchers recently used a \$1,275,000 USDA grant to develop a soy-fortified tomato juice that could potentially benefit prostate cancer patients. They also are conducting clinical trials to study the impact of raspberries and a soy bread on certain cancers. Ohio State's business partners joined Vilsack to discuss how the research is making its way from crops to the clinic to the consumer.

USDA partners with Ohio State on a wide variety of food and agricultural research that provides an important investment in the Columbus community and beyond. Currently, OSU has 67 active research and integrated grants competitively awarded through USDA's National Institute of Food and Agriculture (NIFA), funded at more than \$28.5 million. OSU regularly receives annual capacity building allocations to fund agricultural research and extension. In federal fiscal year 2012, the institution received over \$13 million in extension formula dollars and over \$8 million in formula research dollars from USDA/NIFA.

NIFA's flagship competitive grants program established under the 2008 Farm Bill is the Agriculture and Food Research Initiative (AFRI). AFRI makes awards in five challenge areas—childhood obesity prevention, global food security, climate variability, food safety, and sustainable bioenergy—and through foundational and fellowship programs. The AFRI challenge areas will continue to support societal challenge areas where research, education, and extension can achieve significant and measurable outcomes.

ECONOMIC DEVELOPMENT FUNDING TO SUPPORT BUSINESS GROWTH, CREATE JOBS AND IMPROVE PUBLIC TRANSIT IN TRIBAL COMMUNITIES

Agriculture Secretary Tom Vilsack announced the selection of 28 recipients in rural communities for loans and grants to spur economic development and create or save jobs. "The funding I am announcing will help rural businesses, entrepreneurs and tribal communities obtain the financing they need to grow their businesses and create jobs," said Vilsack. "These grants and loans represent the Obama Administration's commitment to ensure that rural communities attract capital investments that lead to successful business development, job creation, infrastructure improvements, and economically vibrant communities."

USDA Rural Development is providing the loans and grants through the Rural Economic Development Loan and Grant (REDLG) program, the Intermediary Relending Program (IRP), and the Rural Business Enterprise Grant (RBEG) program.

USDA's IRP is designed to increase economic activity and employment in rural communities. Under this program, loans are provided to local organizations (intermediaries) to establish revolving loan funds. These loans will be used for capital improvements, predevelopment costs and energy efficiency upgrades.

For a list of all recipients selected for funding under today's announcement, [click here](#). Funding is contingent upon the recipient meeting the terms of the loan or grant agreement.

VILSACK URGES QUICK HOUSE ACTION ON FARM, FOOD AND JOBS BILL

Agriculture Secretary Tom Vilsack says there's precious little time left for the House to pass its version of a farm, food and jobs bill and for the House and Senate to meld the two bills into one and to pass it before the current bill expires.

Radio Story: [Vilsack Urges Quick House Action On Farm, Food And Jobs Bill](#)

FUNDING FOR PROJECTS TO BOOST RENEWABLE ENERGY PRODUCTION AND REDUCE ENERGY CONSUMPTION

Agriculture Secretary Tom Vilsack announced the USDA is funding 450 projects nationwide focused on helping agricultural producers and rural small businesses reduce energy consumption and costs; use renewable energy technologies in their operation; and/or conduct feasibility studies for renewable energy projects. Funding is made available through the Rural Energy for America Program (REAP), which is authorized by the 2008 Farm Bill.

"The Obama Administration and USDA are helping agricultural producers and rural small business owners reduce their energy costs and consumption – and by doing so is helping to create jobs, preserve our natural resources, protect the environment and strengthen the bottom line for businesses." said Vilsack. "This is part of the Administration's "all of the above" energy strategy. Stable energy costs create an environment for sustainable job growth in rural America."

The announcement included \$412,304 in grant funding to 20 agricultural producers and rural businesses to conduct feasibility studies for renewable energy systems. REAP offers funds for farmers, ranchers and rural small businesses to purchase and install renewable energy systems and make energy-efficiency improvements. These federal funds leverage other funding sources for businesses. In all, USDA announced nearly \$7.4 million in new energy grants. For a complete listing of Rural Energy for America Program grant recipients announced [click here](#).

OFF MIKE

THE MOWERS ARE ACTUALLY MOWING IN CENTRAL TEXAS – Curt Lancaster (Texas Farm Bureau - Waco, Texas TexasFarmBureau.Org) said the county has been mowing the sides of the highways a lot these days. “I don’t think the mowers got out much last year to the terribly dry conditions. I just got some serious windshield time this past weekend driving round trip some 750 miles to Lubbock, San Angelo and back to Waco. For those of you not familiar with Texas geography that is a 13 hour round trip that takes you from central Texas corn, wheat and cattle area to the cotton growing regions of west Texas to the cotton and cattle and sheep areas of west-central Texas and back home.” **Lancaster** reminded us of what a difference a year makes. “The country side is looking much better. Now we are by no means perfect and after all it is summer but it sure beats the summer of 2011. Some pastures are better than others.” There’s cotton and sorghum in fields in west Texas where there was nothing last year. Also on the plus side, the smoke you see in the air now is not from pastures but from the forest fires in Colorado. “In Texas you can always use more rain, so our conditions are not perfect but much-much improved over 2011.”

JUNE 25 MARKS THE START OF THE 2012 SMITHSONIAN FOLKLIFE FESTIVAL – The National Mall is where the celebration is taking place. This year's festival features three themes, "Creativity and Crisis" which celebrates the 25th anniversary of the AIDS Memorial Quilt. The second theme, "Citified," explores the rich culture and community of neighborhoods east of the Anacostia. The exciting news this year is that the third program features USDA, said **Deputy Secretary Kathleen Merrigan** (USDA – www.usda.gov). "I am very pleased to report that we will be continuing our celebration of USDA's 150th anniversary as part of "Campus and Community," which celebrates 150 years of USDA and the Land-Grant university system. Working together, USDA and the Land-Grant system have extended education across the country, helping contribute to American agricultural success and rural prosperity. "Campus and Community" will provide demonstrations, discussions, hands-on activities, and entertainment that showcase the many ways that this partnership works to improve American agriculture and rural life." The Festival runs June 27 to July 1 and then again from July 4-8.

WORLD FOOD PRIZE HONORS LAND-GRANT UNIVERSITIES – The World Food Prize Foundation awarded the universities its Borlaug Medallion. It was presented during a ceremony in Washington, D.C. celebrating the 150th anniversary of the Morrill Land-grant Act of 1862. The measure written by Senator Justin Smith Morrill of Vermont and signed into law on July 2, 1862, by President Abraham Lincoln provided grants of federal lands to the states for the establishment of public universities and agricultural education programs nationwide, and led to the democratization of higher education.

"Land-grant institutions have played a critical role in inspiring multiple generations to attain the highest levels of education and scientific research; fostering the most prolific era of agricultural production ever recorded in human history; and providing a model for emulation around the world as we endeavor to eliminate the scourge of hunger from the face of the earth," said **Amb. Kenneth M. Quinn** (World Food Prize president of the - [The World Food Prize](http://www.worldfoodprize.org)).

Quinn presented the award to Scott Angle, chairman of the APLU Board on Agriculture Assembly and Dean of the University of Georgia College of Agricultural and Environmental Sciences.

The Borlaug Medallion honors those organizations and Heads of State who would not ordinarily be eligible for the World Food Prize, but who have made an especially noteworthy contribution to improving the world's food supply and ensuring adequate nutrition. In the past it has only

been presented to King Bhumibol Adulyadej of Thailand; the Sasakawa Family and its Nippon Foundation of Japan; and Kofi Annan for his leadership of the United Nations.

Quinn noted that Dr. Norman Borlaug - Nobel Peace Prize Laureate, founder of the World Food Prize, and known as the “Father of the Green Revolution” – was a graduate of a land-grant university.
